

Coursera Capstone Project

IBM Data Science Certification

Ramakrishna Samudrala

Contents

1. Introduction

Discuss the business problem and the audience who would be interested in this project.

2. Data

Describe the data that will be used to solve the problem and the source of the data.

3. Methodology

Represents the main component of the report where you discuss and describe all the exploratory data analysis, inferential statistical testing and the machine learning tools that were used and why.

4. Results

Discussing the results

5. Discussion

Discuss the observations noted and the recommendations can be made based on the results

6. Conclusion

Concluding the report

1.0 Introduction

1.1 Background of the Problem

I am helping a friend who is residing in Chennai, India currently. He is living within the walking distance to Chennai Downtown and Railway Station with good public transportation access to work. He has been offered a great opportunity to work in Manhattan, NY and I am helping him to find a similar place to live with all the amenities using my skills that I learned in the Coursera IBM Data Science.

1.2 Problem to be resolved:

Finding a rental apartment unit in Manhattan NY that offer the below requirements

- Apartment with min 2 bedrooms with monthly rent not to exceed US\$7000/month
- Unit located within walking distance (≤ 1.0 mile, 1.6 km) from a subway metro station in Manhattan
- Area with amenities and venues similar to the ones described for current location (as described in section 2.1)

1.3 The intended Audience for this Project

I believe this is a relevant project for any person or entity considering to move to a major city in US (Manhattan, New York), Europe, or Asia, since the approach and methodologies I am presenting here will be applicable in all cases.

2.0 Data

2.1 Data requirements for Present Situation (current residence place)

- Geodata for my friend's current residence 'Valachery' in Chennai, India was established using Foursquare.
- List of Manhattan neighborhoods with clustered venues established via Foursquare as in Course Lab: https://en.wikipedia.org/wiki/List_of_Manhattan_neighborhoods#Midtown_neighborhoods
- List of Subway metro stations in Manhattan with addresses and geodata (Latitude and Longitude): https://en.wikipedia.org/wiki/List_of_New_York_City_Subway_stations_in_Manhattan, <https://www.google.com/maps/search/manhattan+subway+metro+stations/@40.7837297,-74.1033043,11z/data=!3m1!4b1>
- List of rental apartments in Manhattan area with information on neighborhood location, address, number of beds, area size, rent – complemented with geodata via Nominatim. <http://www.rentmanhattan.com/index.cfm?page=search&state=results> https://www.nestpick.com/search?city=new-york&page=1&order=relevance&district=manhattan&gclid=CjwKCAiAjNjgBRAGeiwAGLlf2hkP3A-cPxjZYkURqQEsWQK2jKQEpv_MvKcrIhRWRzNkc_r-fGiolxoCA7cQAvD_BwE&type=apartment&display=list https://www.realtor.com/apartments/Manhattan_NY
- Place to work in Manhattan (Park Avenue and 53rd St) for reference

2.2 Data Sources and Data Manipulation

- Chennai data and its map to be created using Nominatim, Foursquare and Folium mapping
- Manhattan neighborhoods data was obtained using Wikipedia and the Neighborhoods data was organized with geodata via Nominatim and the mapping was done using Folium
- List of Subway stations was obtained from Wikipedia, NY Transit website and Google maps
- List of rental apartments was consolidated by web-scraping the real estate sites for Manhattan. The geolocation (lat, long) data was obtained using Nominatim
- Folium map was the basis of mapping with various features to consolidate all data in one single map where we can visualize all details needed to select an apartment.

3.0 Methodology

Mapping:

The data described in Data Section will be mapped in order to facilitate the choice of at least two candidate places for renting. Then the information will be consolidated in one single map where one can see the details of the apartment, the cluster of venues in the neighborhood and the relative location from a subway station and from work place. A measurement tool icon will also be provided. The popups on the map items will display rental price, location and cluster of venues applicable.

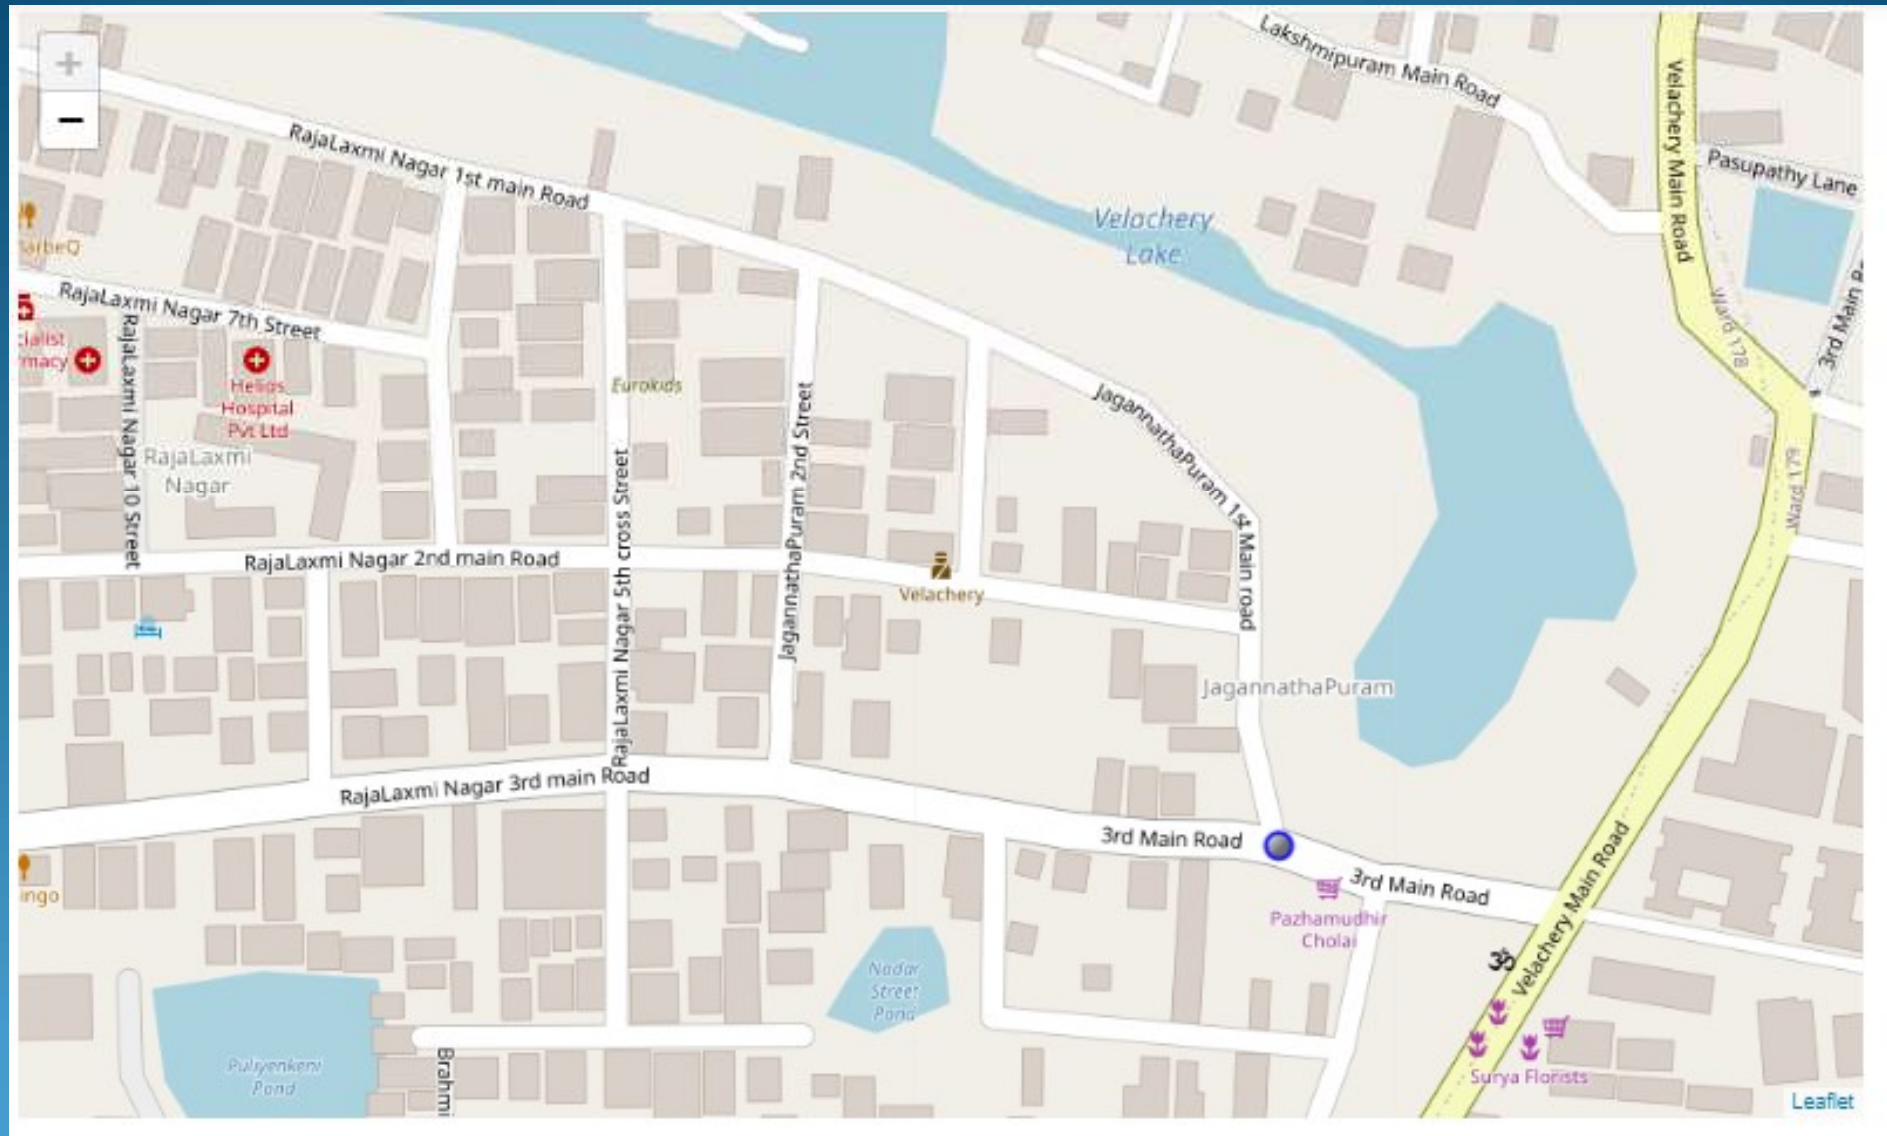

Tools used:

Web scraping of sites was used to consolidate data-frame information. Then the data was saved as .csv files for convenience and simplification of the report. Geodata was obtained by coding a program to use Nominatim and to get latitude and longitude of subway stations and also for each of the apartments for rent listed. Geopy_distance and Nominatim were used to establish relative distances. Seaborn graphic was used for general statistics on rental data. Maps with popups labels allow quick identification of location, price and other features, thus making the selection easier.

The background is a solid blue color with a series of wavy, horizontal lines in a slightly lighter shade of blue at the top, creating a sense of movement or a horizon line.

4.0 Results and 5.0 Discussion

The Neighborhood map of current location - Chennai

Venues around neighborhood

Rental Apts (blue) and Subway Stations (red)

Solving the Problem - Select the apartment for rent

The above consolidate map was used to explore options.

After examining the above map, I have chosen two locations that meet all the requirements for my friend - which will be further assessed to make a choice.

- Apartment 1: 305 East 63rd Street in the Sutton Place Neighborhood and near 'subway 59th Street' station, Cluster # 2 Monthly rent : 7500 Dollars
- Apartment 2: 19 Dutch Street in the Financial District Neighborhood and near 'Fulton Street Subway' station, Cluster # 3 Monthly rent : 6935 Dollars

Venues for Apartment 1 - Cluster 2

| | Neighborhood | 1st Most Common Venue | 2nd Most Common Venue | 3rd Most Common Venue | 4th Most Common Venue | 5th Most Common Venue | 6th Most Common Venue | 7th Most Common Venue | 8th Most Common Venue | 9th Most Common Venue | 10th Most Common Venue |
|----|---------------------|-----------------------|-----------------------|------------------------|-----------------------|-----------------------|------------------------|-----------------------|--------------------------|-----------------------|------------------------|

5.0 Discussion

I was able to explore all the possibilities using the above map and using popups I was able to make a right decision in selecting an apartment.

Apartment 1 rent costs US\$7500 slightly above the US\$7000 budget. Apt 1 is located 400 meters away from subway station at 59th Street and it is 600 meters away from work place (Park Ave and 53rd). I can walk to work place and use subway for other places around. Venues for this apt are as of Cluster 2 and it is located in a fine district in the East side of Manhattan.

Apartment 2 rent cost is US\$6935, just under the US\$7000 budget. Apt 2 is located 60 meters away from subway station at Fulton Street, but I will have to ride the subway daily to work , possibly 40-60 min ride. Venues for this apt are as of Cluster 3.

Based on current residence - Velachery, Chennai venues, I feel that Cluster 2 type of venues is a closer resemblance to my current place. That means that APARTMENT 1 is a better choice since the extra monthly rent is worth the conveniences (especially reduces the subway journey to work place) it provides.

6.0 Conclusion

I built a model here that is very useful to predict a possible rental place for newly coming people to Manhattan neighborhood.

This model is also useful for other people who want to set up new business ventures in any new places like Manhattan or some other countries.

And on from my personal perspective, I just wanted to speak a little bit about how this course work has been -

I am very impressed with the content, lab work and overall organization of the Coursera IBM Data Science Certification Course
Also, I feel this Capstone project helped me to find a great opportunity to practice and apply the Data Science skills I learned.
